FRONTEND ENGINEER

JOB DESCRIPTION

- Develop and Maintain Web Applications: Build, maintain, and optimize the front end of web applications using HTML, CSS, JavaScript, and either React or Vue.js.
- Design Implementation: Ensure all web applications are fully responsive and provide a seamless user experience across various devices and screen sizes.
- UX/UI Design: Apply strong UX/UI principles to ensure intuitive and user-friendly interfaces, enhancing overall user satisfaction.
- Framework Implementation: Utilize modern JavaScript frameworks such as React or Vue to build dynamic and interactive user interfaces. Leverage component-based architecture for code reusability and maintainability.
- Collaborate with Design and Backend Teams: Work closely with UX/UI designers to translate visual designs into functional code and ensure a seamless user experience. Collaborate with backend developers to integrate front-end components with server-side logic.
- Code Optimization and Performance Tuning: Optimize applications for maximum speed and scalability. Identify and address performance bottlenecks, ensuring a smooth and efficient user experience.
- Contribute to Code Optimization: Write clean, well-structured, and maintainable code with a focus on performance and scalability.
- PHP Integration (If Applicable): If your applications involve PHP, you will be expected to integrate front-end components with PHP backends and ensure seamless data flow.
- Troubleshoot and Debug: Identify and resolve front-end issues, ensuring optimal performance and usability.
- Stay Current: Keep up-to-date with the latest trends and best practices in front-end development and UX/UI design, and contribute to continuous improvement initiatives.

JOB REQUIREMENTS

- Experience: Minimum of 4 years of professional experience in front-end development.
- HTML/CSS: Proficient in HTML5 and CSS3, including preprocessors like SASS or LESS. Strong understanding of semantic HTML and CSS best practices.
- JavaScript: Expertise in JavaScript, including ES6+ features. Experience with asynchronous programming, DOM manipulation, and event handling.
- Frameworks: Hands-on experience with modern JavaScript frameworks such as React or Vue. Ability to build and manage complex component-based applications.
- PHP (required): Familiarity with PHP and experience integrating front-end components with PHP backends.
- UX/UI Design: Solid understanding of UX/UI design principles and ability to translate designs
 into functional code. Experience with design tools like Figma or Adobe XD is a plus.
 Responsive Design: Proven experience in building responsive and mobile-friendly web
 applications.
- Version Control: Proficiency with Git and version control workflows.
- Problem-Solving Skills: Strong analytical and problem-solving skills. Ability to identify and resolve technical issues efficiently.
- Communication Skills: Excellent communication and collaboration skills. Ability to work effectively in a team environment.
- Collaboration: Excellent interpersonal and communication skills, with the ability to work effectively in a team environment.
